We offer *Cheap "Insurance"* against scratched or damaged windows & frames...

Please include Protect A Window in your scope of works for quotes and tenders that require the protection of frames, windows, benchtops, bathtubs, tiles – in fact any non porous surface.

**You can't afford not to be protected against potential damage to the valuable surfaces of your project.**

Our key benefits are:

- Operating since **1992** – Original window protection – Australian idea, Australian products, sold worldwide.
- Temporary protection during construction – simply paint on – peel off (lasts for up to 12 months)
- Not affected by natural elements, especially wind – no unsightly plastic "flapping in the breeze" allowing water between plastic & glass – possible staining of glass
- The product is a high build translucent material that is applied in a white liquid form that dries within 30 to 60 minutes (depending on heat/warmth & air movement) and forms a clear protective barrier/membrane against damaging materials such as cement render and grinding sparks...
- Can be applied to all non porous surfaces including fibreglass, acrylic, perspex, low 'e' glass
- Glass only or glass and frame protection
- Easy to apply – easy to remove. **Our product is guaranteed!** (conditions apply)
- Only Suppliers of **"PAW 55"** and **"PAW Exterior"**
- Minimum amount of waste when removed
- Non toxic, water based
- Our product leaves **no residue** on glass when removed,
- Saves in building clean down costs – cleaners are able to clean in less time.
- Winner of 2002 HIA Green Smart Product of the year award. The product is environmentally friendly.
- Allows builders to show their clients that they really **care** about their clients new homes (Also helps to avoid handover delays).
- There is also the **safety** aspect – the product allows light in while providing a safety barrier that people can "see"- the product leaves a fairly clear substance that has an orange peel effect – we have not heard of any workers on site inadvertently walking through a pane of glass that has had our product applied because they didn't "see" it. (Which is often the case with clear glass). No need to waste time & money applying tape crosses to windows that may leave a residue. Broken glass with product applied tends to hold together and doesn't present as many sharp edges, and, is easier to clean up.

Many builders have been very supportive of our product and maintain that the savings made, both in time & money, are the major benefit!

We also provide protection for **spas & bath tubs, kitchen & vanity benchtops, tiles, stainless steel & other non porous surfaces**, especially during construction.

We can even provide a white "block out" for those wanting privacy that can simply be peeled off when ready. (see brochure on website for illustration). Ideal for shop fronts & office windows.

Email us for an obligation free quote today or simply email [sales@protectawindow.com.au](mailto:sales@protectawindow.com.au) with your window schedule or building plans.

"A grain of sand wiped carelessly across a window pane can cause thousands of dollars worth of damage..." why take the risk?
